

Feasibility & Viability

- Analysis of the feasibility of the idea
- Potential challenges and risks
- Strategies for overcoming these challenges

Feasibility

- Dify and n8n allows to build multi agent model in the given time frame
- Firebase provides Robust authentication
- Native Language is supported by various supported API such as Bhashini
- LLM are only used for Planner agent atleast for now hence cost is also less
- Other agents such as Ocean Analytics Agent & Weather Agent fetch data from free verified sources

Challenges

- The applications core functionality is entirely dependent on internet connectivity
- Alerts cannot function without internet connection

Strategies to overcome the challenges

- Local Database is updated regularly whenever internet connectivity is detected
- During offline mode data is fetched from Local Database and shown to the user along with the data's date
- Alerts can be displayed through VHF Alert Broadcast
